CARBON & ALLOY STEEL

42CrMo

MATERIAL / REFERENCE CONDITION

Chromium-molybdenum alloy steel

Typical applications Loaded shafts, spindles and precision machine parts

Material type	Chromium-molybdenum alloy steel
Condition / reference grade	Specify quenching and tempering; state final hardness
Manufacturing	CNC turning · milling · grinding
Reference data	Grade directory reference; request a mill sheet for the specified stock form and treatment. No single strength value applies to every condition.
Specification notes	Do not substitute 4140 or 42CrMo4 without checking the drawing and composition limits.
