COMPANY CAPABILITY BRIEF · 2026

Custom manufacturing for the hardware behind professional audio.

Metalcorex supports speaker, PA, line array, amplifier, touring, and installation-audio teams with drawing-based OEM components made through coordinated metal, polymer, finishing, assembly, and export processes.

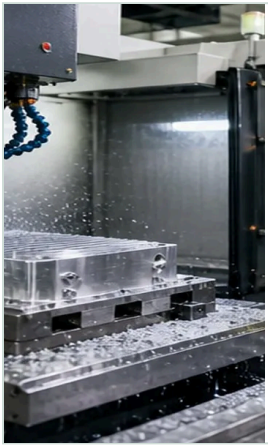

Metalcorex CNC production floor · Xiamen, China

INDUSTRY FOCUS	MANUFACTURING MODEL	CORE PROCESSES	PROJECT CONTACT
Professional audio components	Drawing-based OEM production	CNC · Sheet metal · Molding · Assembly	sales@metalcorex.com

MANUFACTURING SCOPE

Four connected capabilities, managed around one component program.

Process selection, tooling, finish, inspection, assembly, and packing are confirmed from the drawing, quantity, application, and written project requirements.

01

CNC Machining

Milling, turning, drilling, tapping, reaming, deburring, prototyping, and repeat production.

Heat sinks · adapters · knobs · precision brackets

02

Sheet Metal Fabrication

Cutting, perforation, forming, joining, hardware insertion, coating, and mechanical verification.

Grilles · chassis · rear panels · rigging plates

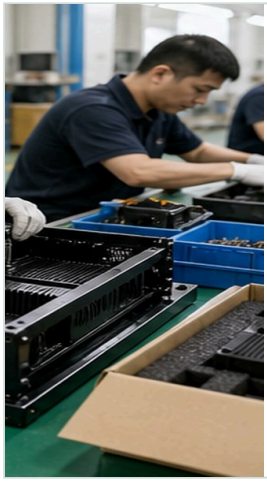

03

Mold & Molding

Part DFM, mold design and fabrication, trial molding, sample review, correction, and production transfer.

Horns · waveguides · frames · handles · seals

04

Assembly & Packaging

Mechanical assembly, hardware kits, labeling, protective packing, export cartons, and shipment preparation.

Subassemblies · installation kits · protected units

PROFESSIONAL AUDIO COMPONENT EXPERIENCE

Manufacturing review informed by where the part works in the system.

We do not sell finished speakers. We manufacture the mechanical, structural, thermal, acoustic, and protective components specified by audio brands.

SUSPENSION

Rigging & Safety Hardware

Rails, fly plates, links, clamps, pins, and retention hardware.

ACOUSTIC PROTECTION

Speaker Grilles & Chassis

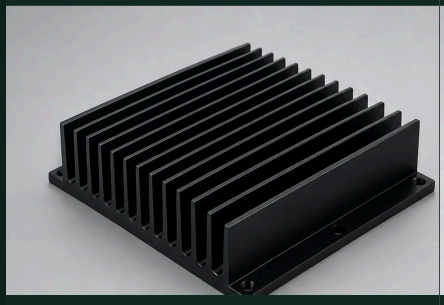

Perforated grilles, amplifier chassis, rear plates, and trays.

INSTALLATION

Mounting Hardware

Yokes, wall mounts, pivots, pole cups, and installation brackets.

PRECISION METAL

CNC & Thermal Parts

Heat sinks, adapter rings, knobs, spacers, and machined interfaces.

FUNCTIONAL POLYMER

Molded Speaker Parts

Horns, waveguides, frames, handles, feet, gaskets, and seals.

ELECTRONICS INTEGRATION

Panels & Interfaces

Amplifier panels, protective covers, brackets, and internal mounts.

FROM DESIGN REVIEW TO REPEAT SUPPLY

A practical release path for overseas OEM programs.

The depth of review and records is agreed for the component, its application risk, order stage, and buyer requirements.

01	**Requirement review**	Confirm files, revision, quantity, material, finish, application, critical features, mating parts, cosmetic zones, and packing needs.
02	**DFM & process planning**	Identify manufacturing risks, tooling implications, realistic tolerances, datums, assembly access, finish allowances, and inspection methods.
03	**Prototype or tooling**	Prepare representative samples or production tooling, record open actions, and separate geometry validation from cosmetic approval.
04	**First article & approval**	Verify agreed dimensions, appearance, fit, interfaces, and documentation before repeat production is released.
05	**Production, inspection & pack-out**	Control the approved route, inspect agreed features, protect cosmetic surfaces, confirm labeling, and prepare export packaging.

SUPPLIER INFORMATION

A clear identity for purchasing review.

LEGAL COMPANY	Xiamen Metalcorex Precision Technology Co., Ltd
PROJECT ADDRESS	No. 402-3, 891 Haicang Blvd, Haicang District, Xiamen, Fujian, China
MANUFACTURING MODEL	Custom components made to customer drawings, CAD files, samples, and written requirements
WEBSITE	metalcorex.com
SALES & PROJECT CONTACT	sales@metalcorex.com

EVIDENCE AGREED BY PROJECT

Tell us what your supplier approval process requires.

- Controlled drawing and revision baseline
- Material or finish records where specified
- First-article or dimensional results
- Approved appearance or finish sample
- Assembly, fit, labeling, or pack-out confirmation
- Project-specific inspection and retention requirements

Final product design, structural ratings, acoustic performance, regulatory compliance, and system certification remain project-specific and are approved by the customer's qualified design authority and test partners.
