CARBON & ALLOY STEEL

40Cr

MATERIAL / REFERENCE CONDITION

Chromium alloy steel

Typical applications Transmission shafts, gears and couplings

Material type	Chromium alloy steel
Condition / reference grade	Specify quenching and tempering; state final hardness
Manufacturing	CNC turning · milling · grinding
Reference data	Grade directory reference; request a mill sheet for the specified stock form and treatment. No single strength value applies to every condition.
Specification notes	Mechanical properties must match section size and heat treatment.
